Week ending June 24, 2018

Issued weekly on the internet, April - November
by the Northeastern Regional Field Office of NASS

nassrfoner@nass.usda.gov

Released June 25, 2018

Excellent week for field work: New York averaged 6.0 days suitable for field work.

Temperatures ranged from 3 degrees below normal to 3 degrees above normal. Weekly precipitation ranged from .05 to 3.85 inches. Dry conditions continued throughout much of the state this past week with only a few areas reporting significant rain. Planting came to completion for most areas with exception to a few fields. Some areas reported hay not coming back early enough. Early planted corn was said to be looking good. There was some concern over the need to irrigate fruit and vegetable crops in dry areas. Long Island vineyards progressed on to fruit set and crews worked to remove cluster zone leaves.

Summary based on NOAA Regional Climate Centers (RCCs) data. DFN = departure from normal.
 Precipitation (rain or melted snow/ice) in inches. Air temperature in degrees Fahrenheit. Climate normals used are for the 1981-2010 period.

REPORTERS COMMENTS, By County

Reporters are from Extension Service (Ext), Natural Resources Conservation Service (NRCS), Farm Service Agency (FSA), Conservation District (CD), farmers, commodity specialists, or other knowledgeable individuals.

Broome County; Maria Heath:

Some areas are still quite wet. More rain was received over the weekend. Corn that got in early was looking real good. Pastures growing well.

Cayuga County; Colleen Cargile, Cayuga County FSA:

Some parts of the county are a bit on the dry side and could definitely use some rain. The crops have not been affected by it too badly so far, but it could become an issue shall the trend continue. Most crops have been planted at this point, and farms are now working on the second cutting of hay.

Cortland/ Tompkins Counties; Jennifer Doty:

Planting has finished, except on a few stray fields. The 1st cutting is mostly complete and 2nd cutting began. Starting to get dry, could use some rain for hay regrowth.

Genesee/ Niagara/ Orleans Counties; Nathan R Herendeen:

Dry weather continues in Niagara and Orleans counties. Rains have gone north or south. Soil is very dry. The last of soy and corn planting need rain to complete germination. Oats are very short and heading out, yields will be low. Wheat is maturing and grain fill is mostly done. Second cutting on alfalfa-grass is underway.

Lewis County; Joe Lawrence:

Rainfall amounts continue to vary around the county but the entire county remains on the dry side, with the central region being the driest.

Livingston County; Dean R Pendergast:

Isolated showers have not ended the need for rain in the county. Pea harvest has begun and most planting is completed.

Oneida County; Devon Kenny:

Conditions continue to be dry with spotty showers not yielding much accumulation. Corn is curling in places. Second cutting of hay is not coming back very quickly. Topsoil and subsoil is dry and dusty. There was some rain on Saturday and Sunday but not a lot of accumulation. Some corn and soybeans are continuing to be planted but most are complete. Most small grains are headed and looking good so far. Fruit and veggie crops are going to struggle if they are not irrigated.

Ontario County; Joann Rogers, County Executive Director FSA:

Ontario County continued with dry hay harvest and spraying planted fields. We are on the US drought monitor as a D0, abnormally dry so producers are hoping for some much needed rain.

Oswego County; Ellen deMey:

Much needed rain was received over the weekend and benefitted all crops.

Schuyler/ Seneca Counties; Kathy Mastellar, CED, Seneca/Schuyler FSA:

The week started with high temperatures and ended with cooler, rainy weather on Saturday.

Suffolk County; Alice V Wise:

Long Island vineyards have progressed into fruit set. Growers are removing cluster zone leaves by hand or machine. This improves air flow and light penetration into the cluster zone.

Yates County; Amy Parmelee, Farm Service Agency

Yates County has seen very little rain. Farmers are starting to say that underseedings are starting to wither under the small grain crop and that leaves are starting to curl on corn.
